# TRIGONOMETRY

Tomo 3

Advisory

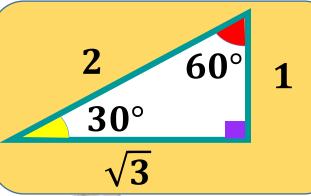

#### Efectúe:

$$A = (6 \tan 30^{\circ} + 12 \cot 60^{\circ}) sen 60^{\circ}$$

## Remembe

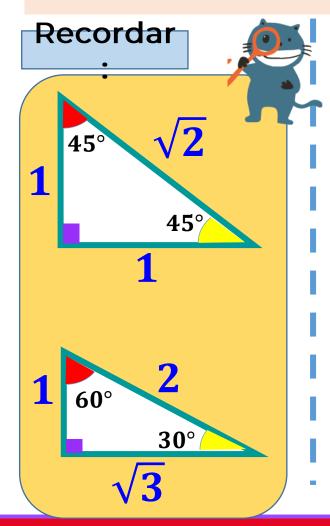

## RESOLUCIÓN

$$A = \left[6 \times \left(\frac{1}{\sqrt{3}}\right) + 12 \times \left(\frac{1}{\sqrt{3}}\right)\right] \times \left(\frac{\sqrt{3}}{2}\right)$$

$$A = \left[\frac{18}{\sqrt{3}}\right] \times \left(\frac{\sqrt{3}}{2}\right)$$

#### Resuelva:

$$2^{x} = \sqrt{2} \sec 45^{\circ} + 3\sqrt{3} \tan 60^{\circ} + 5\sqrt{2} \sec 45^{\circ}$$

## **RESOLUCIÓN:**

$$2^{x} = \sqrt{2} \left(\sqrt{2}\right) + 3\sqrt{3} \left(\sqrt{3}\right) + 5\sqrt{2} \left(\frac{1}{\sqrt{2}}\right)$$

$$2^x = 2 + 9 + 5$$

$$2^{x} = 16$$

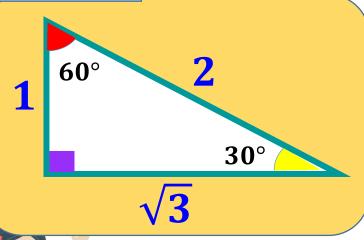

$$2^{x} = 2^{4}$$

Halle el valor de x en la igualdad (x > 0).

$$\frac{21 \csc 30^{\circ}}{x+2} = \frac{x-2}{\cos 60^{\circ}}$$

$$(a-b)(a+b) = a^2 - b^2$$

## Recordar:

#### RESOLUCIÓN:

$$21 \, csc \, 30^{\circ} \cdot cos \, 60^{\circ} = (x-2)(x+2)$$

$$21\times (2)\times \left(\frac{1}{2}\right)=x^2-4$$

$$21 = x^2 - 4$$

$$x^{2} = 25 \Rightarrow x = \sqrt{25}$$

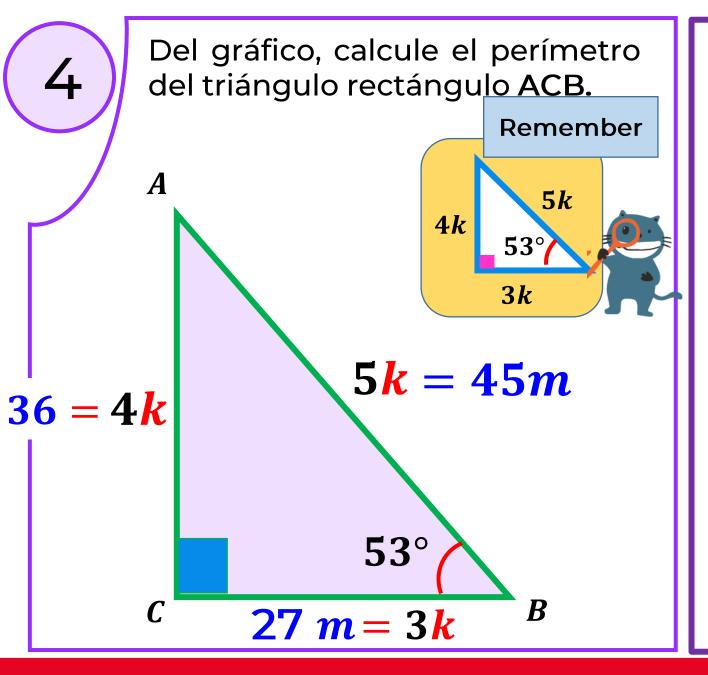

$$x_{1} = -5$$

$$x_{2} = 5 \Rightarrow x = 5$$

$$x_1 = -5$$

$$x_2 = 5$$

#### **RESOLUCIÓN:**

En el  $\triangle ACB$  (Notable de 37° y 53°)

$$\begin{array}{ccc}
 & BC = 27m \\
 & 3k = 27m & \implies k = 9m
\end{array}$$

Luego:

$$AC = 4(9m) = 36m$$

$$AB = 5(9m) = 45m$$

Piden:

$$2p = 27 + 36 + 45$$

$$\therefore 2p = 108m$$

# Del gráfico, calcule $tan \beta$ <del>14</del> 21 <del>-</del> Remember: **45**° **45°**

# **RESOLUCIÓN:**

En el (Notable de 45°)

 $\triangle BCD$  Se observa:

$$DC = 7$$

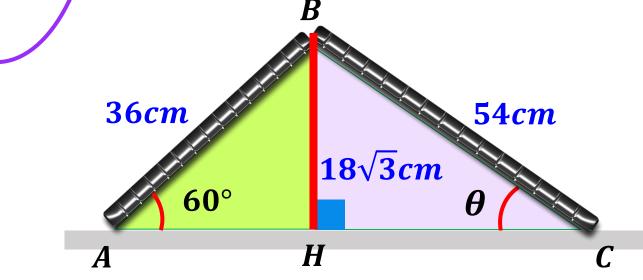

$$\Rightarrow$$
  $BC = 7$ 

Piden:

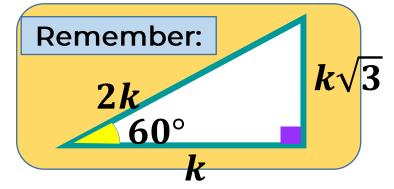

$$\tan\beta = \frac{7}{21}$$

$$\therefore \tan \beta = \frac{1}{3}$$

Dos barras metálicas se encuentran apoyadas, tal como se muestra en la figura. Calcule  $sen \theta$ .

## **RESOLUCIÓN:**

En el  $\triangle AHB$  (Notable de 30° y 60°)

Se

$$2k = 36cm \implies k = 18cm$$

Luego:

$$BH = \sqrt{3}(18) = 18\sqrt{3}cm$$

Piden:

$$sen \theta = \frac{18\sqrt{3}}{54_3}$$

$$\therefore sen \theta = \frac{\sqrt{3}}{3}$$

Escriba verdadero (V) o falso (F) según corresponda:

a) 
$$\cos 88^{\circ} \cdot \sec 88^{\circ} = 1 (V)$$

c) 
$$sen 60^{\circ} \cdot csc 60^{\circ} = 1 (V)$$

b) 
$$tan 45^{\circ} \cdot sen 45^{\circ} = 1 (F)$$

d) 
$$tan 5\theta \cdot cot 3\theta = 1$$
 (F)

## **RESOLUCIÓN**

a) 
$$cos 88^{\circ} \cdot sec 88^{\circ} = 1$$

c) 
$$sen \underline{60}^{\circ} \cdot csc \underline{60}^{\circ} = 1$$

b) 
$$tan 45^{\circ} \cdot sen 45^{\circ} = 1$$

d) 
$$tan 5\theta \cdot cot 3\theta = 1$$

Remembe

$$sen \alpha \cdot csc \alpha = 1$$

Remembe 
$$cos \theta \cdot sec \theta = 1$$

Remembe r:  $tan \beta \cdot cot \beta = 1$ 

#### Calcule el valor de x, si $sen 5x \cdot csc(3x + 26^{\circ}) = 1$

# **RESOLUCIÓN**

#### Del dato:

$$sen 5x \cdot csc(3x + 26^{\circ}) = 1$$

$$5x = 3x + 26^{\circ}$$

$$2x = 26^{\circ}$$

Remembe 
$$r$$
:  $sen \alpha \cdot csc \alpha = 1$ 

$$\therefore x = 13^{\circ}$$

Sitan(a + b) 
$$\cdot$$
 cot 70° = 1

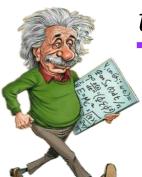

$$cos(a-b) \cdot sec 50^{\circ} = 1$$

#### Efectúe:

$$K = sen^2(a - 15)^\circ + cos 6b$$

#### **RESOLUCIÓN**

#### Del dato:

$$tan(a+b)\cdot cot 70^{\circ}=1$$

$$\Rightarrow$$
  $a+b=70^{\circ}$ 

$$cos(a-b) \cdot sec 50^{\circ} = 1$$

$$\rightarrow$$
  $a-b=50^{\circ}$ 

Tenemos: 
$$a+b=70^{\circ}$$

$$a-b=50^{\circ}$$

$$2a=120^{\circ}$$

$$a=60^{\circ} \implies b=10^{\circ}$$

Piden: 
$$K = sen^2(45^{\circ}) + cos(60^{\circ})$$

$$K = \left(\frac{\sqrt{2}}{2}\right)^2 + \frac{1}{2}$$

$$K = \frac{2}{4} \times \frac{1}{2} = \frac{4+4}{8}$$

$$K=\frac{8}{8}$$

$$K = 1$$

#### Mauricio es un gran fan de los videojuegos. Entra a una tienda de nombre Playmania para mirar algunos precios.

Los precios de los tres productos que a Mauricio le interesan son:

	VIDEOJUEGOS	PRECIO (\$)	
	JACKBOX	Α	
	MINECRAFT	В	
	GRAND THEFT AUTO	С	

Donde  $A = 50\sqrt{2} \sec 45^{\circ}$ 

 $B = 90 \cos^2 45^\circ$ 

$$C = 15\sqrt{3} \cot 30^{\circ}$$

Si Mauricio solo cuenta con \$90 ¿Cuántos videojuegos podrá comprar?

Podrá comprar hasta 2

b. ¿ ¿ cida di cuales de ellos comprara?

Con sus \$90 comprara el MINECRAFT y

GRAND THEFT AUTO a la vez.

#### **RESOLUCIÓN:**

$$A = 50\sqrt{2} \sec 45^{\circ}$$

$$A = 50 \times \sqrt{2} \left( \sqrt{2} \right)$$

$$A = 100$$

$$B = 90 \cos^2 45^\circ$$

$$B = 90 \times \left(\frac{1}{\sqrt{2}}\right)^2 = 90 \times \frac{1}{2} \longrightarrow B = 45$$

$$C = 15\sqrt{3} \cot 30^{\circ}$$

$$C = 15\sqrt{3} \times \sqrt{3} = 15 \times 3 \longrightarrow C = 45$$
