

GEOMETRÍA TOMO VII

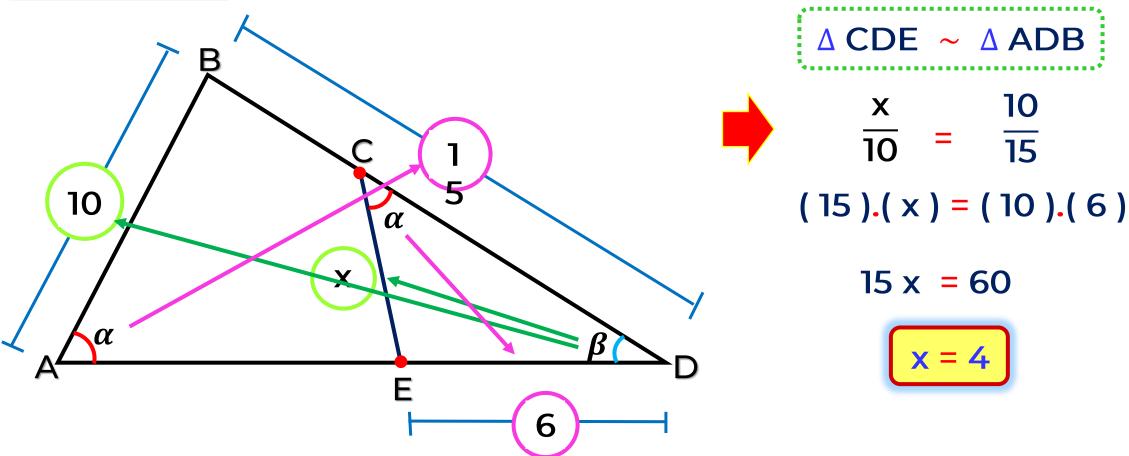

RETROALIMENTACIÓN

 Se tiene un triángulo ABD, donde C ∈ BD, E ∈ AD y m<BAD=m<ECD. Si AB= 10, BD= 15 y ED= 6; halle CE.

Resolución Piden: CE = x

2. En un triángulo ABC se ubican los puntos tal que, D ∈ AB, E ∈ BC, m∢BDE = m∢ BCA y BD=4, BE=3 y EC=5. Halle DA..

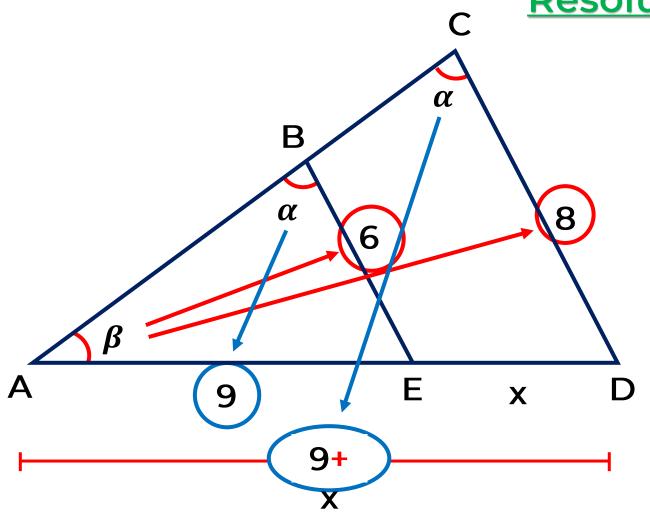

$$\frac{3}{4+x} = \frac{4}{8}$$

$$6 = 4+x$$

3. Halle valor de x

$$\frac{3}{8} = \frac{9}{9+x}$$

$$3(9+x) = 4(9)$$

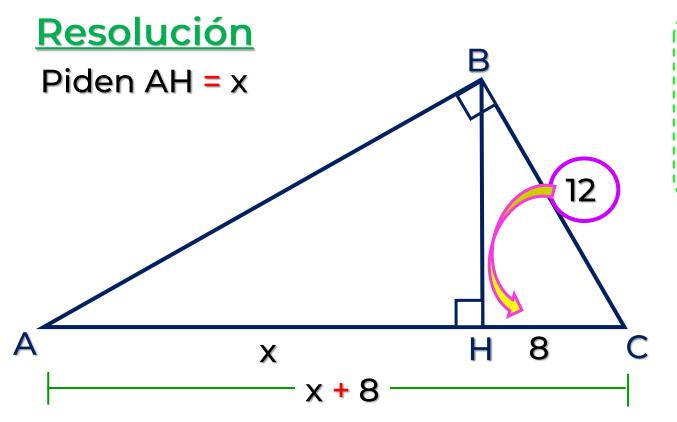

$$27 + 3 \times = 36$$

$$3x = 9$$

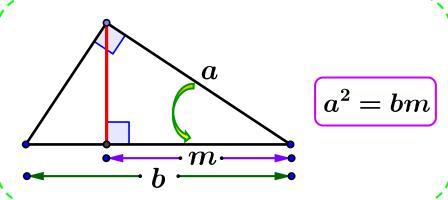

4. En un triángulo ABC, recto en B de traza la altura BH. Si HC =

8, BC = 12, halle el valor de AH.

Teorema del cateto

$$12^2 = (x + 8)8$$

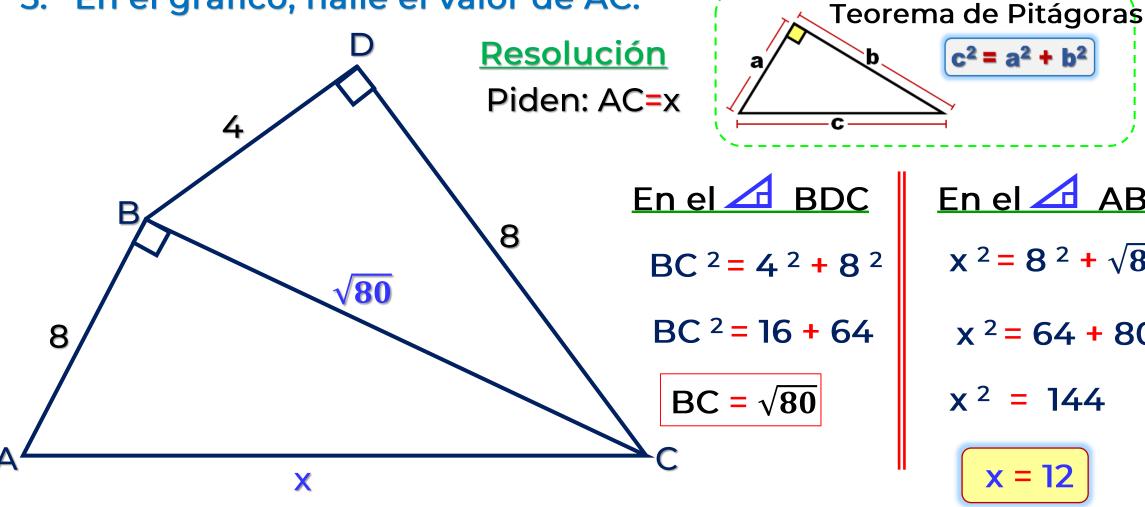

$$144 = (x + 8)8$$

$$18 = x + 8$$

$$x = 10$$

5. En el gráfico, halle el valor de AC.

 $c^2 = a^2 + b^2$

$$x^2 = 8^2 + \sqrt{80}^2$$

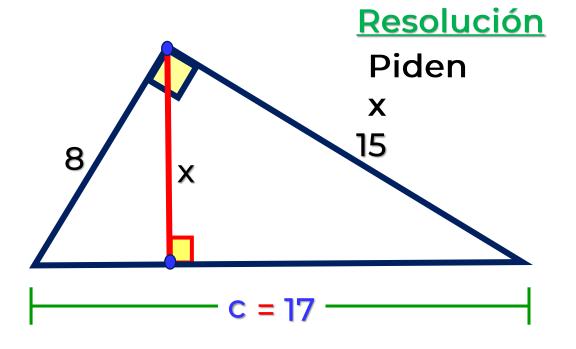

$$x^2 = 64 + 80$$

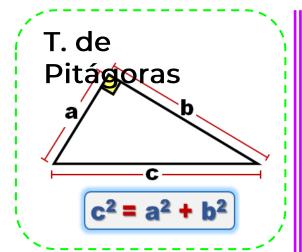

$$x^2 = 144$$

$$x = 12$$

6. En el gráfico, halle el valor de x.

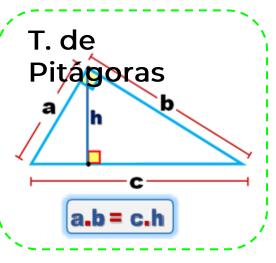

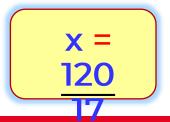

$$c^2 = 64 + 225$$

$$c^2 = 289$$

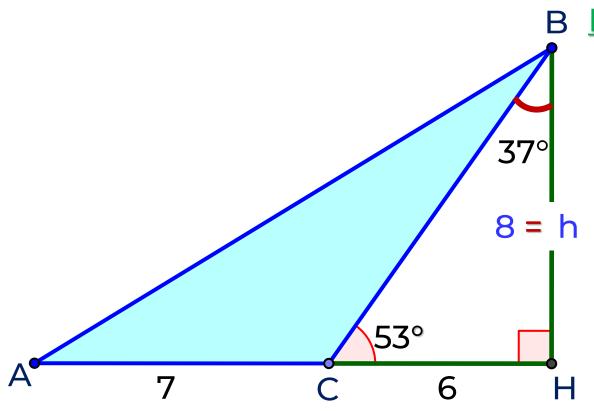

$$8 \times 15 = 17x$$

$$120 = 17x$$

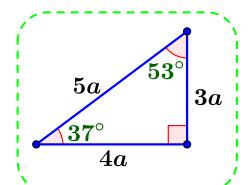

7. Calcule el área de la región ABC.

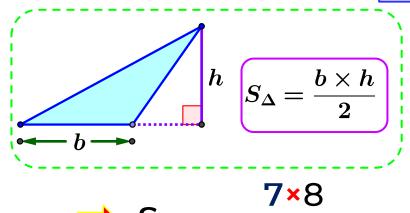

Piden S_{∆ABC}

⊿BHC (notable 37°-53°) → h = 8

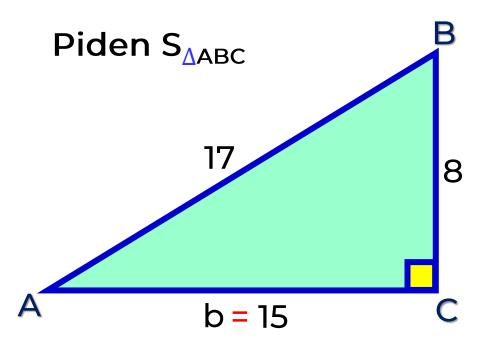

$$\Rightarrow$$
 $S_{\triangle ABC} = \frac{7 \times 8}{2}$

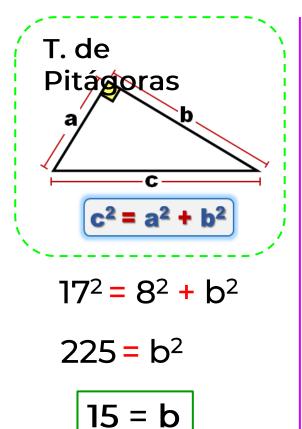

$$S_{\Delta ABC} = 28 u^2$$

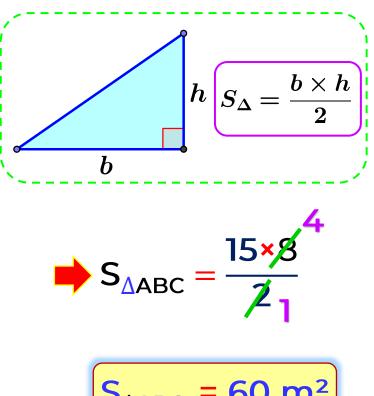

8. Calcule el área de la región limitada por un triángulo rectángulo, si un cateto mide 8m y la hipotenusa mide 17 m.

Resolución

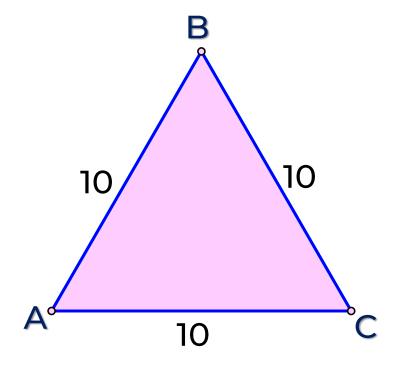

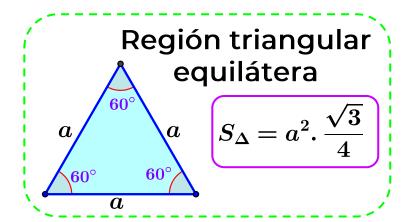

$$S_{\Delta ABC} = 60 \text{ m}^2$$

9. Calcule el área de la región limitada por un triángulo equilátero si la longitud de su lado es 10 m.

Resolución Piden S_{∆ABC}

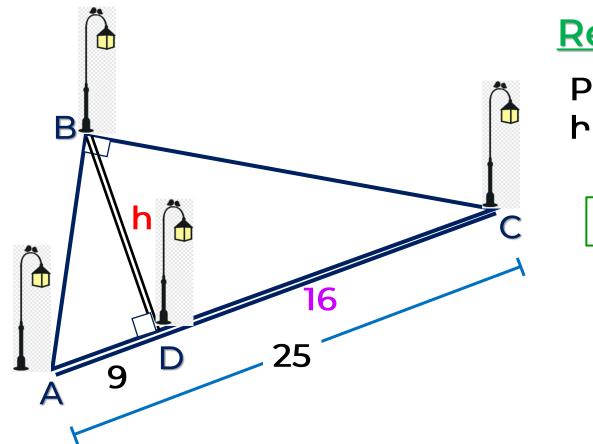

$$S_{\triangle ABC} = \frac{10^{2} \sqrt{3}}{4}$$

$$S_{\triangle ABC} = \frac{100 \sqrt{3}}{4}$$

$$S_{\Delta ABC} = 25\sqrt{3} \text{ m}^2$$

10. Se colocan cuatro postes de alumbrado público en el jardín del profesor Eduardo, como se muestra en la figura. Determine la longitud de la vereda BD que cruza el parque.

Resolución
