TRIGONOMETRY

Review

Chapter 1, 2 y 3

HELICO-MOTIVACIÓN

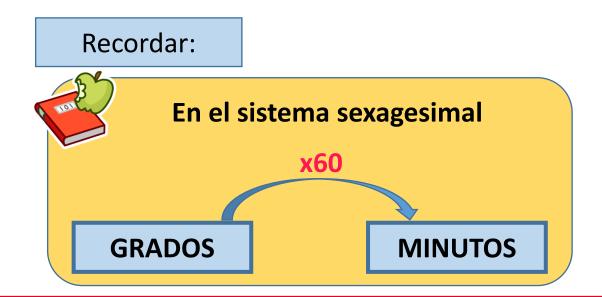

1

Convierte los siguientes ángulos a minutos sexagesimales:

RESOLUCIÓN:

I) 10° II) 17° III) 25°

I)
$$10^{\circ}$$
 = $12(60')$ = $720'$

||)
$$18^{\circ}$$
 = $18(60')$ = $1080'$

III)
$$30^{\circ} = 30(60') = 1800'$$

2

Convierte los siguientes ángulos a segundos sexagesimales:

RESOLUCIÓN:

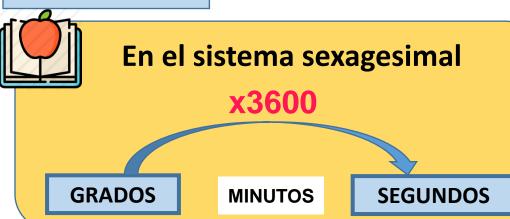

I) 6°

= 6(3600")

= 21600"

I) 6° II) 22° III) 40°

Recordar:

II) 22°

= 22(3600")

= 79200''

III) 40°

= 40(3600")

= 144000''

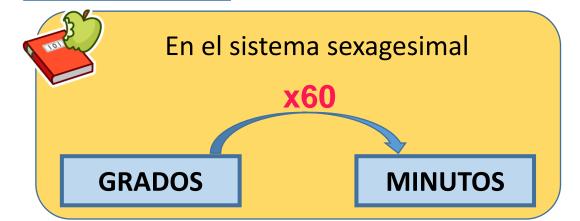

3

Calcula P – Q, Si:

$$P = \frac{3^{\circ}24'}{12'}$$

$$Q = \frac{9^{\circ}10'}{50'}$$

Recordar:

RESOLUCIÓN:

$$P = \frac{3^{\circ}24'}{12'}$$

$$P = \frac{3(60') + 24'}{12'}$$

$$P = \frac{180' + 24'}{12'}$$

$$P = \frac{204}{12^{4}} = 17$$

$$Q = \frac{9^{\circ}10'}{50'}$$

$$Q = \frac{9(60') + 10'}{50'}$$

$$Q = \frac{540' + 10'}{50'}$$

$$Q = \frac{550^{\circ}}{50^{\circ}} = 11$$

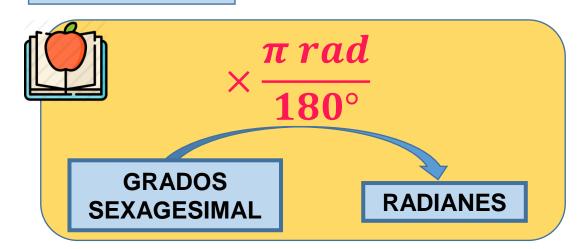

$$\therefore P - Q = 6$$

4

Convierta los siguientes ángulos al sistema radial:

- a) 270° b) 135° c) 162°
- Recordar:

RESOLUCIÓN:

$$a) 270^{\circ} \times \frac{\pi \, rad}{180^{\circ}} = \frac{3\pi}{2} rad$$

$$\begin{array}{ccc}
3 \\
b) 135 & \times \frac{\pi \, rad}{180} & = \frac{3\pi}{4} \, rad \\
4
\end{array}$$

$$(c) 162^{\circ} \times \frac{\pi \, rad}{180^{\circ}} = \frac{9\pi}{10} rad$$

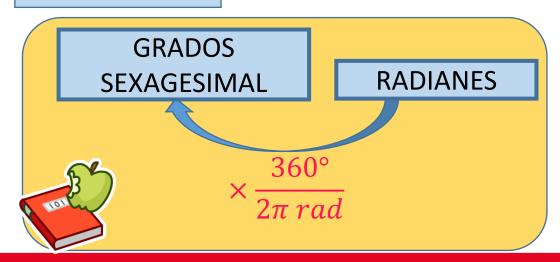

Calcule el valor de

$$A = \frac{216^{\circ}}{\frac{2\pi}{5}} - 2$$

RESOLUCIÓN:

$$A = \frac{216^{\circ}}{\frac{2\pi \text{ rad}}{5} \times \frac{360^{\circ} - 2}{2\pi \text{ rad}}}$$

Recordar:

$$A = \frac{216}{72} - 2$$

$$A = 3 - 2$$

$$A = 1$$

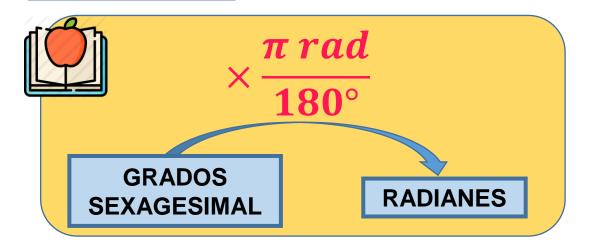

Halle la medida del ángulo θ en el sistema radial.

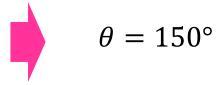

$$\theta = 13^{\circ} + 35^{\circ} + 110^{\circ} - 8^{\circ}$$

Recordar:

RESOLUCIÓN:

Procedemos a realizar la suma:

Luego lo pasamos al sistema radial:

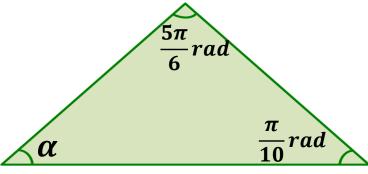

$$\theta = 150^{\circ} \times \frac{\pi \, rad}{180^{\circ}}$$

$$\therefore \theta = \frac{5\pi}{6} rad$$

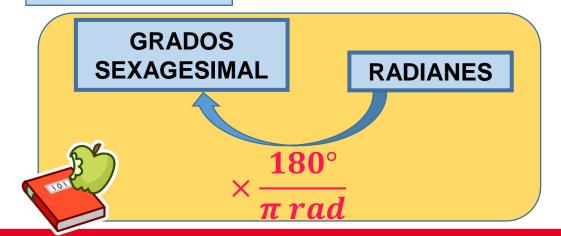

En el triángulo mostrado, calcular el valor de α en el sistema sexagesimal:

Recordar:

RESOLUCIÓN:

En el triángulo

$$\frac{5\pi}{6}rad + \frac{\pi}{10}rad + \alpha = 180^{\circ}$$

Convertimos todo al sistema sexagesimal

$$\frac{5\pi}{16}rad \times \frac{180^{\circ}}{180^{\circ}} + \frac{\pi}{10}rad \times \frac{180^{\circ}}{180^{\circ}} + \alpha = 180^{\circ}$$

$$150^{\circ} + 18^{\circ} + \alpha = 180^{\circ}$$

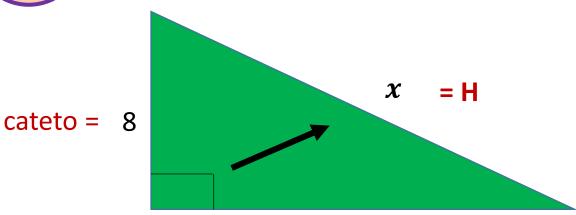

$$\alpha = 180^{\circ} - 168^{\circ}$$

$$\alpha = 12^{\circ}$$

8

Del gráfico, halle el valor de x.

Recordar:

La Hipotenusa es el lado que se opone al ángulo recto.

8 = cateto

RESOLUCIÓN:

Por el teorema de Pitágoras:

$$(H)^2 = (cateto)^2 + (cateto)^2$$

$$x^2 = (8)^2 + (8)^2$$

$$x^2 = 64 + 64$$

$$x = \sqrt{128}$$
 = $\sqrt{(64)(2)}$

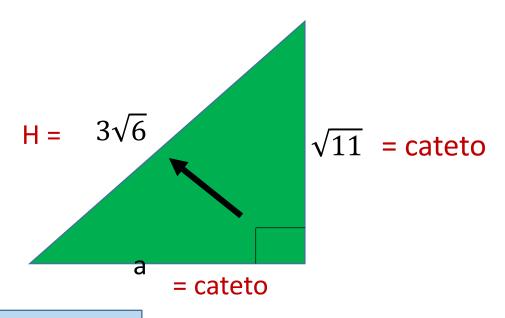

$$x = \sqrt{64} \sqrt{2}$$

$$\therefore x = 8\sqrt{2}$$

9

Del gráfico, halle el valor de x.

Recordar:

La Hipotenusa es el lado que se opone al ángulo recto.

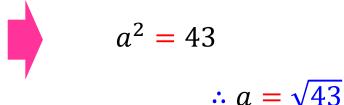

RESOLUCIÓN:

Por el teorema de Pitágoras:

$$(H)^2 = (cateto)^2 + (cateto)^2$$

$$(3\sqrt{6})^2 = (\sqrt{11})^2 + (a)^2$$

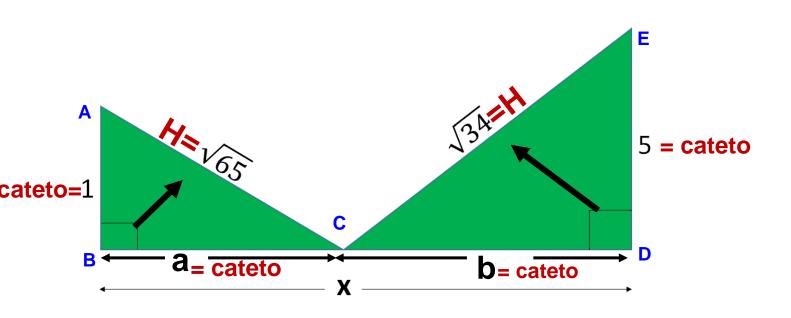

$$54 = 11 + a^2$$

Se tiene d

Se tiene dos postes de luz AB y ED, además dos cables de refuerzo AC y EC, se quiere saber la distancia entre los dos postes (BD)

Resolución:

En el ⊿ABC

$$(\sqrt{65})^2 = (1)^2 + (a)^2$$

$$65 = 1 + (a)^2$$

$$64 = (a)^2$$

$$a = \sqrt{64}$$

$$a = 8$$

En el △CDE (Por el teorema de Pitágoras)

$$(\sqrt{34})^2 = (5)^2 + (b)^2$$

$$34 = 25 + (b)^2$$

$$9 = (b)^2$$

$$\boldsymbol{b}=\sqrt{9}$$

b = 3

De la figura

$$x = a + b = 8 + 3$$
 : $x = 11$
